SUMMARY

Kes on etnobioloogid ja miks nad kohtusid Padisel?

Etnobioloog uurib inimese ja taimede ning loomade vahelisi seoseid. Etnobioloogide hulka kuulub mitme teadusala esindajaid: taime- ja loomanimetusi uurivaid keeleteadlasi, botaanikuid, kes uurivad pärandkooslusi, taimekasvatust ja taimede otstarvet (tarvilikkus söögiks, raviks, värvimiseks jne.), folkloriste, keda köidavad loomi ja taimi käsitlevad narratiivid, farmatseute, kes õpivad tundma taimedest ja loomadest saadud drooge, zoolooge, traditsioonilisi maastikke kirjeldavaid ökolooge jt. Eestis on etnobioloogide seas ka semiootikuid, kes loovad kultuuri märgisuhete teoreetilisi mudeleid jms.

Old treasures in the new Europe: the future of ethnobiology in the East and Far East

Report from the ISE European Regional Meeting in October 2010 – contributed by Renata Sõukand

This ISE Regional Ethnobiology Workshop, supported by the Cultural Endowment of Estonia, was held in Kallaste tourist farm, Padise, Harjumaa, Estonia, October 15-17th, 2010. The workshop reflected a special emphasis on the ethnobiology of the former communist Eurasia.

Research by participating scholars was focused primarily in Eastern Europe and its border areas. The concept for

the Workshop was to share an overview of the current ethnobiological research ongoing in the

Plants used for making recreational tea in Europe: a review based on specific research sites

Renata Sõukand^{1*}, Cassandra L. Quave², Andrea Pieroni³, Manuel Pardo-de-Santayana⁴, Javier Tardío⁵, Raivo Kalle^{1,6}, Łukasz Łuczaj⁷, Ingvar Svanberg⁸, Valeria Kolosova⁹, Laura Aceituno-Mata^{4,5}, Gorka Menendez-Baceta⁴, Iwona Kolodziejska-Degórska^{10,11}, Ewa Pirożnikow¹², Rolandas Petkevičius¹³, Avni Hajdari¹⁴ and Behxhet Mustafa¹⁴

Abstract

This paper is a review of local plants used in water infusions as aromatic and refreshing hot beverages (recreational tea) consumed in food-related settings in Europe, and not for specific medicinal purposes. The reviewed 29 areas are located across Europe, covering the post-Soviet countries, eastern and Mediterranean Europe. Altogether, 142 taxa belonging to 99 genera and 40 families were reported. The most important families for making herbal tea in all research areas were Lamiaceae and Asteraceae, while Rosaceae was popular only in eastern and central Europe. With regards to botanical genera, the dominant taxa included *Mentha*, *Tilia*, *Thymus*, *Origanum*, *Rubus* and *Matricaria*. The clear favorite was *Origanum vulgare* L., mentioned in 61% of the regions. Regionally, other important taxa included *Rubus idaeus* L. in eastern Europe, *Chamaemelum nobile* (L.) All. in southern Europe and *Rosa canina* L. in central Europe. Future research on the pharmacological, nutritional and chemical properties of the plants most frequently used in the tea-making process is essential to ensure their safety and appropriateness for daily consumption. Moreover, regional studies dedicated to the study of local plants used for making recreational tea are

ктура Центра

16–20 ноября 2015 г. состоялся научный визит делегации Центра исследований белорусской культуры, языка и литературы НАН Беларуси в составе заместителя директора по научной и инновационной работе Центра, доктора исторических наук С.П. Витязя, научных сотрудников отдела фольклористики и культуры славянских народов кандидата исторических наук Ю.И. Внуковича, кандидата филологических наук Я.И. Гриневич, И.А. Васильевой, И.Ю. Смирновой в Эстонский Литературный Музей в рамках программы по межакадемическому обмену учеными между Национальной академией наук Беларуси и Эстонской академией наук. Поездка состоялась при финансовой поддержке Министерства иностранных дел и Академии Наук Эстонии.

укция и услуги

Во время встречи белорусской делегации с директором Эстонского Литературного Музея Урмасом Сутропом были обсуждены актуальные направления изучения белорусского и эстонского фольклора.
